

Classifying Triangles

Triangle Classification			
There are two ways of classifying triangles. We can either look at a triangle's side properties or angle properties. <i>Note: Congruent means equal in size or length</i>			
	Equilateral	Isosceles	Scalene
CLASSIFYING BY SIDE	3 congruent sides 	2 congruent sides 	No congruent sides 
	Acute	Right	Obtuse
CLASSIFYING BY ANGLE	3 angles $< 90^\circ$ 	1 angle = 90° 	1 angle $> 90^\circ$ 

Instructions: Classify the triangles by both side and angle properties.
